Re Glorieta Gardens water billing review for Buildings 7 and 8

Dear Chris,

APAS Consulting completed a focused review of the Glorieta Gardens water billing materials that were provided for the recent billing dispute. The work covered the available water and sewer billing evidence, the supporting bill records, the account and meter information, the building level comparison, and the operating periods that matter for management review. The work gave special attention to Building 8 because that is the account tied to the formal rebill and unpaid balance. Building 7 was reviewed as a comparison building within the same property.

The main result is straightforward. The formal record cites a retroactive rebill of \$95,017.57 and an unpaid Building 8 balance of \$113,874.41. The indexed billing support for Building 8 shows \$100,386.80 in charges and 4,764,000 gal across 22 account period records during the dispute support window. That amount is the practical center of the billing issue because it is in the same order of magnitude as the account balance being disputed.

Executive summary

We built a clean evidence set from the water billing files, converted the bill details into a structured record, separated the records by account and meter, and compared the relevant periods in plain English. The result is a repeatable review system. It can support the current billing dispute, refresh the dashboard when new invoices arrive, and show how water and sewer costs are moving against operations.

For Building 8, the most important point is that the available records support a dispute narrative around charges that were billed during a period connected to vacancy, rehabilitation, and reoccupation questions. The analysis does not ask the City or the water agency to accept a guessed number. It shows the record, the charges, the gallons, the meter account, and the period.

For Building 7, the records provide a useful comparison point because Building 7 has indexed activity across all three periods. Building 8 has no indexed before vacancy bills in the current evidence archive, so the report shows that as a source gap instead of filling the gap with an assumption.

The review produced three practical outputs. First, it produced a normalized billing record with account, meter, service period, gallons, charges, and phase. Second, it produced a management view comparing Building 7 and Building 8 across the before vacancy, vacancy and rehabilitation, and current operating periods. Third, it produced a monthly continuation path so the same dashboard can stay current as invoices come in.

Core numbers

Item	Number	What it means
Formal retroactive rebill cited	\$95,017.57	The rebill number cited in the dispute record
Formal unpaid balance cited	\$113,874.41	The balance connected to the disputed Building 8 account
Building 8 indexed dispute support	\$100,386.80	The sum of 22 Building 8 account period records in the support window
Building 8 indexed gallons	4,764,000 gal	The total gallons tied to the indexed Building 8 support
Indexed water charges	\$39,229.56	The water portion visible in the available statement backup
Indexed sewer charges	\$55,474.80	The sewer portion visible in the available statement backup
Evidence archive reviewed	532 source files	The broader billing file collection available for the review
Canonical billing records	278 records	The normalized bill records used for dashboard and report analysis

What we did

- Organized the water meter billing files into a reviewable evidence set.
- Extracted bill level data into a structured billing record so the numbers can be checked and reused.
- Separated Building 7 and Building 8 because those are the buildings connected to the vacancy and dispute discussion.
- Compared each building across the before vacancy period, the vacancy and rehabilitation period, and the current operating period.
- Prepared a clean evidence packet, a Word version, a PDF version, and a dashboard view that can be used for discussion and follow through.
- Drafted the city facing correction request language so the billing issue can be presented with facts, dates, account numbers, meter numbers, charges, and gallons.
- Set up a repeatable monthly structure so future invoices can be added to the same record instead of starting the analysis over each time.

Period comparison

The table below is the core operating view. It keeps the comparison simple. Building 7 has records in all three periods. Building 8 has no indexed before vacancy bills in the current archive, which is why the Building 8 before vacancy cell is shown as no indexed bills.

Building	Before vacancy	Vacancy and rehab	Current operations	Unit context
Building 7 / North Account 1 692 380 502 Meter 1 800 224 848	\$57,749.60 2,800,000 gal 3 bills	\$132,278.56 6,315,000 gal 12 bills	\$53,852.98 2,536,000 gal 15 bills	63 visible units from 07 W123 through 07 W345
Building 8 / 13 200 Alexandria Account 2 745 714 336 Meter 61 302 354	No indexed bills	\$50,131.93 2,379,000 gal 11 bills	\$83,402.45 3,972,000 gal 16 bills	58 visible units from 08 W103 through 08 W322

Combined period totals

Period	Charges	Gallons	Bill records
Before vacancy	\$57,749.60	2,800,000 gal	3 bills
Vacancy and rehab	\$182,410.49	8,694,000 gal	23 bills
Current operations	\$137,255.43	6,508,000 gal	31 bills

Takeaways

- The Building 8 dispute is best explained around the documented \$95,017.57 rebill, the \$113,874.41 balance, and the \$100,386.80 of indexed support.
- The strongest presentation is factual. It should show the account, meter, time period, gallons, charges, and why the building status matters.
- The review should avoid overstated claims. Where the archive has a gap, the report should call it a gap rather than replace it with a guessed number.
- The City or water agency should be asked to explain the estimate basis, the meter history, any meter change work order, and the adjustment worksheet behind the rebill.
- The recurring value is operational. Once this structure is in place, monthly invoices can update the same dashboard and show whether usage, cost, and dispute exposure are improving or getting worse.
- The bottom line benefit is early visibility. A monthly review can show rising costs, unusual usage, billing changes, and possible operating issues before they become a large unresolved balance.

Action items

- Use the letter and evidence packet to support a corrected billing review and credit request for Building 8.
- Ask for the account ledger, meter history, meter change documentation, estimate basis, adjustment worksheet, and investigation notes.
- Ask the property management team to send the monthly water and sewer invoices as soon as they are received.
- Continue the same analysis every month so R4 can track trends, compare usage by building, and see operating impact on the bottom line.
- Review the dashboard each month for unusual movement in gallons, charges, balances, and account status.
- Use the monthly dashboard to connect billing movement to operations decisions, repair priorities, vacancy recovery, and cash flow planning.

Monthly continuation program

Now that the system is set up, the simplest way to keep the work valuable is for the Glorieta Gardens property management team to send the monthly invoices to APAS Consulting as soon as they arrive. APAS can then update the billing record, refresh the dashboard, and summarize the movement in usage, charges, balance exposure, and potential revenue impact.

This creates a recurring operating control. Instead of reviewing a large billing issue after the fact, R4 can see the trend month by month, identify unusual water or sewer charges early, and connect billing movement to property operations. That helps protect cash flow, supports budget decisions, and gives management a clearer view of whether corrective actions are improving the property economics.

Detailed monthly record

The monthly records below are included so Chris and the property team can see exactly where the figures came from.

Building 7 monthly record

Service period	Gallons	Charges	Reads	Phase
2023 02 24 to 2023 03 28	949,000 gal	\$19,570.87	17,899 to 18,848	Pre vacancy
2023 03 28 to 2023 04 26	910,000 gal	\$18,771.77	18,848 to 19,758	Pre vacancy
2023 04 26 to 2023 05 25	941,000 gal	\$19,406.96	19,758 to 20,699	Pre vacancy
2023 09 28 to 2023 10 27	819,000 gal	\$16,907.20	25,070 to 25,889	Vacancy/rehab
2023 10 27 to 2023 12 01	956,000 gal	\$19,714.30	25,889 to 26,845	Vacancy/rehab
2023 12 01 to 2024 01 03	803,000 gal	\$16,579.36	26,845 to 27,648	Vacancy/rehab
2024 01 31 to 2024 02 29	190,000 gal	\$4,019.12	28,322 to 28,512	Vacancy/rehab
2024 02 29 to 2024 03 27	0 gal	\$1,498.88	28,512 to 28,512	Vacancy/rehab
2024 05 06 to 2024 06 05	796,000 gal	\$16,435.93	997 to 1,793	Vacancy/rehab
2024 07 30 to 2024 08 27	707,000 gal	\$14,612.34	3,128 to 3,835	Vacancy/rehab
2024 08 27 to 2024 09 27	670,000 gal	\$13,854.22	3,835 to 4,505	Vacancy/rehab
2024 09 27 to 2024 10 29	676,000 gal	\$13,977.16	4,505 to 5,181	Vacancy/rehab
2024 10 29 to 2024 12 02	562,000 gal	\$11,641.33	5,181 to 5,743	Vacancy/rehab

Service period	Gallons	Charges	Reads	Phase
2025 01 29 to 2025 02 28	102,000 gal	\$2,216.02	6,455 to 6,557	Vacancy/rehab
2025 02 28 to 2025 03 31	34,000 gal	\$822.70	6,557 to 6,591	Vacancy/rehab
2025 03 31 to 2025 04 29	34,000 gal	\$822.70	6,591 to 6,625	Post rehab
2025 04 29 to 2025 05 29	126,000 gal	\$2,707.77	6,625 to 6,751	Post rehab
2025 05 29 to 2025 07 01	74,000 gal	\$1,642.30	6,751 to 6,825	Post rehab
2025 07 01 to 2025 08 04	77,000 gal	\$1,703.78	6,825 to 6,902	Post rehab
2025 08 04 to 2025 08 29	33,000 gal	\$802.22	6,902 to 6,935	Post rehab

2025 04 04 to 2025 05 01	217,000 gal	\$4,572.35	2,662 to 2,879	Post rehab

Service period	Gallons	Charges	Reads	Phase
2025 05 01 to 2025 06 03	217,000 gal	\$4,572.35	2,879 to 3,096	Post rehab
2025 06 03 to 2025 07 01	217,000 gal	\$4,572.35	3,096 to 3,313	Post rehab
2025 07 01 to 2025 08 07	217,000 gal	\$4,572.35	3,313 to 3,530	Post rehab
2025 08 07 to 2025 09 04	217,000 gal	\$4,572.35	3,530 to 3,747	Post rehab
2025 09 04 to 2025 10 02	217,000 gal	\$4,572.35	3,747 to 3,964	Post rehab
2025 10 02 to 2025 11 04	217,000 gal	\$4,572.35	3,964 to 4,181	Post rehab
2025 11 04 to 2025 12 08	217,000 gal	\$4,572.35	4,181 to 4,398	Post rehab
2025 12 08 to 2026 01 06	216,000 gal	\$4,551.86	4,398 to 4,614	Post rehab
2026 01 06 to 2026 02 02	216,000 gal	\$4,551.86	4,614 to 4,830	Post rehab
2026 02 02 to 2026 03 04	186,000 gal	\$3,937.16	4,830 to 5,016	Post rehab
2026 03 04 to 2026 04 03	70,000 gal	\$1,560.34	5,016 to 5,086	Post rehab
2026 04 03 to 2026 05 05	549,000 gal	\$11,374.95	5,086 to 5,635	Post rehab
2026 05 05 to 2026 06 01	359,000 gal	\$7,481.89	5,635 to 5,994	Post rehab
2026 06 01 to 2026 06 29	423,000 gal	\$8,793.24	5,994 to 6,417	Post rehab

Closing

The immediate goal is to support the current billing dispute with a clear factual record. The longer term goal is to turn monthly utility bills into a repeatable operating control for Glorieta Gardens. APAS Consulting can continue maintaining this view as invoices come in and can provide a short monthly update showing trends, exceptions, and bottom line impact.

Respectfully,

APAS Consulting LLC
